

# Perkiomen School

# RISK BECOMING YOUR BEST

At Perkiomen, we know that experience is the best teacher, and that the challenges of life can only be solved by digging in, taking part, and pushing through. Our students learn to take calculated risks and to create value wherever they go.

Our close knit, caring, accomplished faculty create a highly participatory learning environment that encourages students to be courageous. Equally impactful is our culture of gratitude and joy. We are all teachers and learners, celebrating differences and supporting each other's well-being, through everyday tasks and in defining moments.

In this boarding and day environment, we all feel welcomed. Faculty and students engage and develop meaningful mentorships. And, students find lasting friendships in our globally diverse community.

What we learn today must prepare our students for tomorrow. With a strong liberal arts foundation and future-focused innovative education, we prepare our students for college and the challenges of a new economy.

## Entrepreneur Institute

At Perkiomen, we define entrepreneurship as value creation. Our students will one day create value for a living. We believe there is no better time than now to start creating value and learning the necessary risks and failures that line the path to success. Now is the time to lean in and accomplish something bigger than believed possible.

## Medical Institute

Our students pursue understanding of the medical field from very diverse perspectives. The Medical Institute is equipped to support student interests that may vary from clinical procedures, to research, to physiology or psychology. Our learning environment extends beyond the classroom into the hospitals and wet labs of our partners in industry.

## Artificial Intelligence Institute

Students explore all emerging technologies through the A.I. Institute. Understanding the technologies that will pervade the future is paramount for students who wish to lead rather than be led. The post-industrial economy will require our students to be literate in the systems that are emerging now and they have the opportunity to explore and understand the use of these technologies today.

## Design Institute

Quality design is central to every functional thing we create. Design is an approach and methodology that can improve lives and guide us to a better and more sustainable future. Students in the Design Institute take on projects that make campus and the world a better place. Centered on best practices, they emerge with a skill set that is applicable in anything they choose to do in the future.

## A Celebration of Self

### Celebrating Our Differences

Domestic and international, athletic and artistic, introverted and extroverted: at Perkiomen, our differences aren't just affirmed, they're celebrated and cultivated.

### Fostering Self-Knowledge

Our supportive environment enables our students to discover what they need to thrive, become stronger self advocates, stand up for their beliefs, and envision their futures.

### Participation Required

Each of our students is empowered to make positive change and try new things. They actively engage in our global community which creates both respect for individual affinities and the celebration of world connections.

---

## Transformation by Design

### Small Size = Big Support

Our faculty-to-student ratio and an advisory program facilitate meaningful mentorships that encourage engagement and support individual ambitions. College counselors guide students and families through the college discovery, application, and decision process.

### Moments of Joy

Perkiomen is a place where people feel safe and loved. We delight in delighting each other because we know that every small act of kindness builds a stronger culture of gratitude and joy.

### The Space for Innovation

Purposely dedicated to next-generation technology and its applications, our Institutes spark us to think deeply about the future of Entrepreneurship, Medicine, and Artificial Intelligence.

---

## Focused on the Future

### Life Beyond the Classroom

We are a place of immersive, 360-degree education. Inside and outside the classroom, this is the place where students can learn how to program a robot while also learning what it means to be a good human. Students learn to choose their university based on "right-fit" and what will best further their education.

### Hands-On Investigation

At Perkiomen, hands-on learning isn't confined to a few field trips per year. The spirit of exploration is infused into every lesson, and each student finds their own path towards mastery.

### Evolving Education

Merging a liberal arts foundation with our student-centered approach, we expand and innovate education for the 21st century. Our students create their academic paths with 145 courses of study, 30 AP classes, and an expansive roster of extracurriculars to choose from. We provide the platform for ambition and preparation for university and beyond.
